

# Cocktails & Cuisines

Presented to you by **Foodie Friends**

*Thu Van Luu | Jessie Ng | Fraser Clarke | Aks Sreenivasan*

## Elevator Pitch

*"We've created an app which allows users to search for meal & cocktail recipes by name, presenting each result in an eye-catching and interactive accordion list."*

# Concept

## DESCRIPTION

An app that caters to the foodie and drinkie in all of us, we bring you a cookbook & mixer manual in digital form, allowing you to 'thumb' through and search an arsenal of recipes easily.

## USER STORY

- AS A foodie / drinkie (ie. restaurateurs, chefs, bloggers)
- I WANT to be able to search a meal or cocktail by name
- SO THAT I can find recipes relating to the category I choose

## MOTIVATION FOR DEVELOPMENT

- Since foodies & drinkies are inclusive of people from all walks of life, our primary motivation was to build an app which would act as a 'digital cookbook & drinkbook' for our targeted audience.

# Process

## 1. Technologies used

- GitHub
- Local & Server-side APIs (x2) – MealDB & CocktailsDB
- Foundation framework
- HTML, CSS, Javascript w/jQuery

## 2. Challenges

- Javascript
- Foundation accordions
- Utilising unfamiliar CSS framework
- Navigating GitHub pulls, merges, etc.

## 3. Successes

- Teamwork & Communication
- Implement working accordion
- Project implementation

## 4. Breakdown of tasks and roles

### ➤ THU:

- ❖ Project Manager
- ❖ GitHub Setup &
- ❖ HTML
- ❖ Implementation of Foundation Framework

### ➤ JESSIE:

- ❖ Presentation
- ❖ README
- ❖ Wireframe Design
- ❖ CSS Styling

### ➤ FRASER: Javascript for *Meals*

### ➤ AKS: Javascript for *Cocktails*

## DEMO

Enjoy this [first-look](#) at the *'fruits'* of our labor! 🥰

# Directions for Future Development

- Implement interactive photo carousel above footer to display recipe suggestions
- Add embedded video suggestion to home page
- Turn instructions text into ordered list
- Add ingredient & meal type (dinner, dessert, etc) search functionality as opposed to only searching by name
- Incorporate modal when search bar or category is empty & user attempts search
- Retain user's last search results upon refresh using local storage
